

April 21, 2015

## Rainwater Collection 101 for the Texas Hill Country

### Rainwater Harvesting 101

Join us Tuesday, April 21 in Johnson City to learn all about the basics of starting your own rainwater harvesting system. Mark and Peggy Leatherman of Rain Harvest Resources will be on hand to present an overview of a basic rainwater harvesting system, answer questions, and point you in the right direction to get started on your own system!

**Join us!**

**April 21, 2015 from 6:00 pm to 7:00 pm**

**The Johnson City Library, 501 Nugent, Johnson City**

**For more information: (830) 868-4469**

**Fun, free and open to the public, refreshments will be served!**

A properly designed and installed rainwater harvesting system can provide clear, safe water for potable and non-potable use and is especially useful for landscaping and other outdoor needs. In addition to providing high-quality water, a rainwater system is actually highly drought tolerant. Because it collects the rain so efficiently, even a light rain can make a big contribution to your water storage!
