

NATURE-BASED SOLUTIONS FOR HILL COUNTRY WATER CHALLENGES

Thursday, April 17 | 6:00 - 7:30 PM

Kerrville | Schreiner University - CCAC Ballroom 2

Free event - all are welcome! RSVP at bit.ly/txwater25

CAN AQUIFERS BE INFRASTRUCTURE? YES!

Water infrastructure conversations often involve pipes and facilities, but *natural* infrastructure - from aquifers and riparian areas to healthy soils and open spaces - plays an important role in protecting our water supplies, supporting water quality, and mitigating the impacts of floods.

In this Texas Water Symposium, join us for a discussion and Q&A opportunity about nature-based solutions for water challenges in the Hill Country.

As part of the Texas Water Symposium, this event is *free and open to the public*. The session will be recorded and aired on Texas Public Radio.

PANELISTS

Marisa Bruno,
Hill Country Alliance

April Sansom, Selah,
Bamberger Ranch Preserve

Ryan McGillicuddy,
Texas Parks & Wildlife

David Bezanson,
The Nature
Conservancy

The Texas Water Symposium shares perspectives from landowners, policy makers, scientists, water resource experts and regional leaders. Learn more at hillcountryalliance.org/texaswatersymposium
