

# DROUGHT IMPACTS TO THE HILL COUNTRY

WED FEB 22 | 6:30-7:30 PM | SCHREINER UNIVERSITY, CCAC BALLROOM 2

## *How is the ongoing drought impacting folks on the ground, and what can we do to improve water stewardship?*

In 2022, San Antonio received only a third of its average annual rainfall. Popular swimming holes from Jacobs Well in Wimberley to the Guadalupe River dried up - impacting wildlife, agriculture, and tourism revenue in addition to many rural communities dependent on limited water resources. As the drought continues into 2023, what can we do to preserve the water we've got?

Join us for an evening of expert panel discussion with an opportunity for audience Q&A at the end.

In partnership with Texas Water Symposium, this event will be recorded and aired on Texas Public Radio.

**TARA BUSHNOE**  
Moderator  
General Manager of Upper Guadalupe River Authority

**BOB BARKER**  
President of C&M Precast Concrete in Kerrville, Texas

**BÉNÉDICTE RHYNE**  
Wine Country Consulting and winemaker

**DAVE MAUK**
